Evaluation of the temperature-dependent kinetic barrier of phosphoryl transfer in a quaternary structure of purine nucleoside phosphorylase from *E. coli*. The temperature-dependent kinetic barrier of phosphoryl transfer in a quaternary structure of *E. coli* purine nucleoside phosphorylase (EC 2.4.2.1) has been evaluated by stopped-flow measurements and  $[^{19}\text{F}]\text{NMR}$ . The electrophilic 6-fluoropurine riboside (6-FPur) nucleotide was employed as the substrate and the nucleoside was found to be the obligatory product. At 25 degrees C the nucleoside phosphorylase catalyzed a slow irreversible reaction with a rate constant of  $0.0033\text{ s}^{-1}$ , increasing 1 order of magnitude in the temperature range from 25 to 45 degrees C. Stopped-flow experiments have shown that the nucleoside phosphorylase has a four-state activation-deactivation mechanism, with equilibrium constants of the individual steps being  $K_1 = 3.0$ ,  $K_2 = 0.17$ ,  $K_3 = 0.009$ , and  $K_4 = 0.00011$ . The values of the individual equilibrium constants are in agreement with the theoretical predictions of Eyring's theory. The barrier of phosphoryl transfer for nucleoside 6-FPur is estimated to be about  $-45\text{ kJ/mol}$ . The apparent activation energy ( $\Delta G^\ddagger$ ) for nucleoside 6-FPur phosphoryl transfer is found to be  $-48\text{ kJ/mol}$ , indicating that the phosphoryl transfer is partially catalyzed by the formation of a stable transition state, formed by the attack of the active site phosphate on the beta-phosphorus of the substrate.

In California, a similar \$15 minimum wage took effect Jan. 1 and hundreds of thousands of workers have lost their jobs. "I think that there is going to be some people that are going to be unemployed," said Cameron Mah, a political science student at the University of California-Berkeley. "And then there will be people that aren't affected because they have seniority, or they're more flexible." These are just two examples of the uncertainty that comes with any public policy change. The best way to minimize the harm is to have a national conversation on the minimum wage. National conversations happen in stages. A few well-intentioned people start the conversation, others join, and eventually a public consensus is formed. But the minimum wage debate is no ordinary conversation. Many people oppose a minimum wage increase and are publicly outspoken about it. "It's not a topic that's been talked about for very long," said Elizabeth MacLennan, a sociology student at the University of California-Berkeley. "You see people saying the sky's going to fall in, this is the end of the world and all these things. So there is a certain amount of fear and uncertainty in the air." Student experience Mah said he and his fellow students believe people should be paid enough to live on, but a \$15 minimum wage won't be good for everyone. "At \$15, it's going to be hard for a student to live on," Mah said. "You're going to have to take out loans, or you're going to have to work multiple jobs, maybe start a side business or something." The UC-Berkeley students interviewed for this story say the minimum wage won't be good for everybody 2d92ce491b
