Safe Torrent Scanner Crack+ Free License Key Latest

Download the torrent in a clean and safer way! Why we need a simple safety extension to obtain and download torrents safely? Safe Torrent Scanner was initially released in November 2016, alongside the Safe Browsing (Safe Search) of Google Chrome. In that month, the developers received several reports that users were becoming victims of malware that was disguised as torrents. Sadly, these files can be harmful to your operating system. Sometimes, infected torrent files can contain macros that silently install malware on your computer. You never know if you are downloading something from a reliable, known and trusted torrent provider, because maybe you are just taking a chance on the legitimacy of that particular file. Another unpleasant fact is that security measures are being devised by hackers and cyber criminals, which makes it all the more important to obtain legitimate torrents. Finally, some of those malicious files are ready to be shut down right away, while others might take several hours or even a few days. But what if you don't even have a chance to open your torrent client and close the browser right away? Obviously, using an extension such as Safe Torrent Scanner gives the user a chance to know before downloading the file if it is safe or not. If that is the case, then you will be able to uninstall the malicious torrent file you are downloading in a matter of seconds. Although torrents are one of the most popular and popular P2P networks used to obtain and share files, Safe Torrent Scanner assures the user that it is a safe and secure solution for downloading torrents. The main purpose of this software is to prevent users from visiting dangerous websites, to remove malware and to protect their computer. A secondary purpose is to enable the user to select the torrents they want to download, to do so in an effective and simple way. There's nothing complicated about the extension and it basically does exactly what it is supposed to do in a convenient way. What's more, the developers are working on incorporating more torrents to the extension in the near future. Stay tuned!
