Structure of a DNA complex with antamanide, a minor groove binding agent for bacteriophage T4 DNA. The structure of the complex of the minor groove binding polyamide, antamanide (2), with DNA has been determined by X-ray crystallography. The polyamide forms a 1:1 complex with the five base-pairs of the operator region of bacteriophage T4 DNA. The structure is a sharp left-handed spiral, reminiscent of the structure of the T4 endonuclease III recognition complex with DNA, with two polyamide strands lying on the minor groove in antiparallel orientation. The significant structural differences compared to the B-DNA form indicate that the nature of the minor groove in double-stranded DNA plays a part in the mechanism of polyamide binding. \$77.65 CHIMNEY CORNERS PHILLIPS PIPES & PRODUCTS SPECIALTIES In 1983, Chimney Corners came into being with
