Steps to install the gSOAP Library download the latest gSOAP toolkit from the web (www.gsoap.org) download the gSOAP SDK from a web (another web, www.code.google.com) install the toolkit and the SDK To test the library, you need to have a SOAP server on the same computer, so that gSOAP can receive information. The example code that you find in a tutorial will work only with a server running on the same computer. You will need to run two different processes. In fact, the example creates a SOAP server and a SOAP client. The server returns messages in the form of a SOAP envelope with the parameters enclosed. The server processes the request and returns the result in the form of a SOAP envelope. The client process the returned envelope and displays the result. gSOAP is a set of programming libraries and tools designed to make it easier to build XML-based services using C/C++, as well as using SOAP/XML over multiple protocols. It consists of three main modules: gSOAP, gSockets, and the SOAP Library. This set of tools and libraries represents a fully-featured web service implementation. gSOAP The gSOAP Toolkit The gSOAP toolkit (called gSOAP) is an open-source package that consists of C / C++ libraries and tools that ease the development of service-oriented applications and the integration of (X)HTML-based client-side applications and XML-based server-side applications. In order to use this toolkit, you need to install (or have installed) the following dependencies: You will be able to access all the supplied libraries and tools via a unified command-line interface (like "make" or "make install"). gSOAP used to be a Mozilla-based project. Nowadays however, it is part of the libsoap project, an Apache License 2.0-licensed project. A list of the currently supported platforms is available on the gSOAP project's webpage. Sockets The gSOAP toolkit also provides various gSOAP-based Sockets API (gSOAP Sockets API). More information about gSOAP-based Sockets and Network Programming is available at the gSOAP site. libsoap The libsoap is a set of C++ header files and libraries and makes it easy to create secure web services. It implements the standard WS-Security 1.1, WS-Addressing 1.1, WS-PortName 1.1 and WS-Transfer 1.1 specifications. WSDL The WSDL (Web Service Description Language) specification defines a machine-readable description of XML-based services. A WSDL file can be used to create both a representation of a service and a description of the SOAP messages that a client needs to send to the service. gSOAP WSDL Support gSOAP is able to generate WSDL files for you, regardless of whether your services are based on the SOAP 1.1 standard or on the newer SOAP 1.2 RPC standard. gSOAP can generate WSDL for your service 09e8f5149f

SoapAction is automatically included if it is an XML Schema Schema type. Its default value is xs:string (text). String value. If a simple or complex type is the target element of a xsi:type attribute, this attribute is ignored. Integer value. If a simple or complex type is the target element of a xsi:type attribute, this attribute is ignored. Text value. If the type of the element is not simple or complex, this attribute must be provided, but is ignored. Integer attribute. If an element has an xsi:type attribute, this attribute is always applicable to the element and specifies a value that is unique to the XML document in which the element appears. It is used by the type-mapping attribute to locate types for local XML attributes and by the xsi:type attribute to determine the type of an imported node. Integer attribute. This value determines the scope of wsdl:portType and wsdl:binding element, if it is bound to a specific scope. An integer value starts at 1 and is incremented by 1 after an attribute is created. The SOAP Toolkit for gSOAP gSOAP implements SOAP 1.2 XML encoding and document/literal styles, WSDL 1.1 and MTOM/MIME/DIME attachments, SOAP-over-UDP, request-response, one-way messaging and WS-Addressing / WS-Security. gSOAP Description: Request/Response Handler The aim is to be clear and fast to use. High speed supports multithread, bounded blocking and file I/O, big data structure. gSOAP Description: Python Support An implementation of the Python API for gSOAP. From python to gSOAP: complex network programming made easy, it allows us to use Python without programming language. gSOAP Description: Note: The samples and tutorials presented here are the best we could find online. I hope this helps you a little bit :) East Timor citizenship law overturned by highest court in Cambodia A Phnom Penh court has overturned a law stripping East Timorese citizens of their citizenship, the highest level of scrutiny that can be applied to the Cambodian legal system. "Any move to revoke citizenship is not permitted," Duch Deth, court prosecutor told AFP on Thursday after Judge Oudl Nambuthan handed down a 30-year jail sentence against a Cambodian man for arranging the murders of 18 people to make it look like a genocide against East Timorese. "It is a case of a legal, international problem," Oudl Nambuthan told AFP outside the court. "In Cambodia, there is no citizenship law." The legal wrangles stemmed from a failed trial in 2003 in which Cambodian prime minister Hun Sen was said to have ordered the murder of 1,500 East Timorese in an attempt to build a case for international intervention to stop the province's independence. A former aide to the prime minister and former president, Hun Sen, confessed in 2007 to leading the killings. Two other people were said to have confessed under torture. East Timor won independence in 2002. Another case involving Cambodians stripping citizenship is that of an Australian man who authorities said forced a local woman into prostitution to pay for a legal bill. While the Australian man was sentenced to 10 years, her husband, the leader of a tiny
