- Attempts an IP address or hostname - port to check, timeout and volume to follow. - User-friendly GUI. - The actual results of the Ping command for each computer. - Internet of things home control, with support for multiple devices and a server. - The list can be easily saved, exported, and imported from / to Windows. - Periodic network monitoring and network status display, with notification. - The network monitor comes packed with multiple user controls. - The settings can be easily saved. - D-Link power line network monitoring. - Supports multiple devices simultaneously. - Includes a remote control server and an IP camera. - Commands can be easily sent from the local network to a connected device (virus, device, email, etc.). - Supports SNMP and Microsoft Windows Remote Management. - Supports command-line and GUI modes. - Supports multiple platforms, including: Mac, Windows, Linux, SmartTV, Windows mobile, and more. - Supports IP addresses and hostnames. - Supports the Timeout, Volume, Retry and Pause command. - Supports IP and Port. - Supports multiple servers and devices. - Supports ExactMatch. - Supports ping, ssh, smb, tftp, and more. - Supports all switches. - Supports the IP of the target device, or the name of the device on the network. - Supports the IP of the target device, or the name of the device on the network. - Supports IP and Port. - Supports multiple servers and devices. - Supports the Timeout, Volume, Retry and Pause command. - Supports IP and Port. - Supports multiple servers and devices. - Supports ExactMatch. - Supports ping, ssh, smb, tftp, and more. - Supports all switches. - Supports all commands and protocols. - Supports multiple servers and devices. - Supports multiple protocols. - Supports all switches. - Supports all command-line and GUI modes. - Supports all devices. - Supports multiple servers and devices. - Supports multiple protocols. - Supports all switches. - Supports all devices. - Supports multiple servers and devices. - Supports multiple protocols. - Supports all switches. - Supports all commands and protocols. - Supports multiple servers and devices. - Supports multiple protocols. - Supports all switches.

What's New in the?

Ruckus - Network Analyzer 4.1.4.2 Network Analyzer provides network activity, protocol and link information of the devices on the network. It analyzes the data and displays the information in a graphical user interface. Network Analyzer is suitable for 802.11 WLAN, WDS, gigabit ethernet, and many other network types including VPN. It is also an ideal tool for troubleshooting and network maintenance. Key Features * Network Analyzer provides information on the device itself, including IP address, MAC address, model, serial number, MAC configuration, manufacturer, vendor, BIOS version, wireless state, hardware state, and boot configuration. * Network Analyzer provides information on the network itself, including topology, address allocation, routing, IP addresses, DHCP state, proxy state, WAN links, subnet mask, broadcast, and hop counts. * Network Analyzer is designed to filter out data and only display the information that you really need to know. You can enable/disable the filtering of certain fields for each type of device to analyze. You can also filter out specific fields for each device, such as vendor, wireless state, and hardware state. * Network Analyzer has a convenient auto-sorting of the information for easier viewing. * Network Analyzer displays information about the devices in a text-only format, a screen-grabs (for capturing images), or an HTML format. * Network Analyzer also provides a detailed information of the devices, including manufacturer, model, serial number, serial number, IP address, MAC address, MAC configuration, IP version, MAC configuration, hardware state, firmware, IP address, link status, IP address type, MTU size, last IP address, proxy IP address, IP source, interface number, IP address, TCP session number, ARP entry, broadcast IP address, WAN IP address, AP IP address, wireless configuration, DNS server IP address, DNS server name, DNS IP address, DNS server name, gateway IP address, gateway name, current IP address, current link status, current wireless configuration, current wan IP address, current wireless configuration, IEEE 802.11b/g/n, WDS, DFS, ESSID, and SSID. * Network Analyzer can operate as a standalone tool or you can launch it from a shortcut and have it automatically launch a particular network connection or series of networks. * Network Analyzer can also be used as a virtual machine. * Network Analyzer can detect any changes in a network's IP address allocation. * Network Analyzer can also identify IPv4-v6 dual-stack or IPv6-only networks. * Network Analyzer can identify networks that are VLAN-tagged, or untagged. * Network Analyzer can detect the amount of broadcast traffic for the entire network. * Network Analyzer can detect which device is

Windows® 7, 8, 8.1, or 10. 1 GHz Intel Core 2 Duo or faster processor 2 GB RAM 800 MB available hard disk space
