Alphomega Manual Walter Bressert's. AlphOmega Elliott Waves 5.7 For MetaStock Ver - AlphOmega Elliott Waves 5.7 For MetaStock Ver. 9.7z.Q: Probability that a group of 5 people in a row have the same birthday Suppose I have a group of 5 people. They are named A, B, C, D, and E. People A, B, C, D, and E have the same birthday. What is the probability of this happening? A: It seems to me that the complement of your problem, i.e., what is the probability that none of them have the same birthday, is the problem you want. In that case, given that all are born the same day, the probability of no two are born on the same day is just: $\frac{365!}{365^5} = \frac{41496}{365^5}$ (Since there are 365 days in the year.) So the probability of your question is $1 - \frac{41496}{365^5} \approx 0.866$. A: Number the people, so that A, B, C, D, and E are 5. Then write the condition as $\text{person_number}_1 = \text{birthday}_1$ and $\text{person_number}_2 = \text{birthday}_2$ and... and $\text{person_number}_5 = \text{birthday}_5$, where birthday_i is the i -th person's birthday. By the way, you can easily see that the number of such permutations is equal to $\frac{365!}{(365-5)! \cdot 5!}$, which is equal to $\frac{365!}{365^5}$, which is what you got. A: Consider all possible ways of selecting one person from 5 and assign it to A and the rest to B . So, there are $\binom{5}{1} = 5$ such selections, and then we choose A among them. This can be done in $\binom{4}{1}$
