Paint Shop Pro Paint Shop Pro is not an editing program like Photoshop or Illustrator, but it is useful for working with photos and logos, because it has a great photo-manipulation capability. Paint Shop Pro supports layered photo editing and has tools for resizing, cropping, adding effects, and rotating. Although Paint Shop Pro now has the Photoshop Tools and Effects filters, it still has a large selection of useful photo-editing tools. To create layers, place images in cells. To group together similar images, hold down the ALT key while you click each image; it creates a new cell on its own. Another feature of Paint Shop Pro is the ability to work with bitmaps as layers. To create a bitmap layer, hold down the ALT key while you click the image, and it creates a new cell with its own bitmap as a layer. You can easily copy or move a bitmap layer by dragging it, just as you can with regular layers. You can choose between working with images in their individual cells or in layers. * Paint Shop Pro: __

You can also change the size and shape of your brush. You do this by selecting the Brush tool and then either clicking the Brush Size button, or dragging on the canvas to change the size. The shape can be changed by clicking the Brush Shape button. The Bevel tool is one of Photoshop's most useful tools. The Bevel tool allows you to create two or three different types of bevels on text. Photoshop's Liquify tools allow you to distort, enhance, and soften the appearance of shapes and objects on an image. The best way to use these tools is by erasing objects using the Eraser tool, or with the eraser tool. Then you can use the Liquify tool to make an object look soft and blurred. If you use the Grid tool, make sure you turn it on before you use the tools. This helps you see exactly where on your canvas you can move your image. If you're unsure about an area, use the Zoom tool to look at a different portion of your image. The Blur Filter allows you to soften and blur an image, and create a new layer with the blurred image. The gradient tool is useful for creating cool, animated effects on your images, and you can also create cool text effects by using the Type tool. The Pen tool is used to draw lines, make selections, and paint on images. You can use the Pen tool to draw on a layer, drawing a line, or any lines between two points that you specify on the canvas. If you just want to make a selection, the Selection tool is better for making selections. The Move tool allows you to move an image on your canvas, and is especially useful for resizing images. If you want to create shapes like logos, borders, and tabs, use the Shape tool. Photoshop has a lot of useful features, and it's useful to learn a bunch of them. Most of the tools you'll use in your everyday work will be in Photoshop's Tools palette. If you look at the left-hand side of your canvas, you'll see a palette of tools and controls. You can customize the Tools palette to your liking. You can set the brush size, brush shape, and number of brush variations. You can also set the Brush Fill and Brush Stroke. The Fill feature is useful for adding backgrounds to images. It◆

hello guys. I have a problem. I loaded an exe file into gmail, it runs, and then out of nowhere, the programs shuts down! but if the next time I open it, I drag it off to the desktop and then re-open, there is no problem, it runs normally. it's a problem I tried to reproduce but it isn't reproducible very often. the exe runs the programs fine until the programs shuts down and then when I drag it off to the desktop to try again, it works normally. Also, I'll re-run it, and then it'll shut down in between running a program. Any clues? I'm using windows 7, and I don't know if that helps. A few things. Go to "C:\Program Files\Google\Gmail\chrome and delete everything in that folder. Reboot. I am very certain that you have a virus on your computer, if you are not an expert. Remove all your plugins and extensions. Go to Start then run Google and click "Chrome" you may have a virus here also that is causing problems. If you can't get rid of it then call the company that made the program and report the problem to their support. Thank you cesar! I don't know if you'll believe me, but I just backed up everything in that folder. I'm very confident that there's no virus. I just reinstalled chrome and google, and I'm back to normal. I honestly don't know how that whole process worked. Usually I can't get rid of viruses. I've been able to in the past, with a computer fixer, but it wasn't worth it this time. With that folder gone, I just launch it normally. It runs, shuts down, and then starts normally, but I know it still has a problem, because I still have to plug in a firewall, and with that back up, and the program running normally.
