A year ago this week, the Russian government made what some would argue was a historically significant decision, electing Vladimir Putin to be their next leader for a fourth term. The decision was based on the Kremlin leader's reputation as a strongman during his two terms of service as Russia's leader from 2000 to 2008, and on promises he made during his campaign that he would get things done for them in the form of having built a very successful economy, without the need for the kind of social change that he was famous for having brought to Russia during his first term. But a year later, the new Putin, marred by high inflation, mass demonstrations and allegations that he is manipulating the presidency to consolidate his power even more, is facing unprecedented challenges and criticisms that are evidence of a changed Russia and a changing Russia. In the lead-up to Putin's 12-year presidency, he had always been highly rated and trusted by the Russian public and by western leaders and diplomats. At a time when, as one French diplomat puts it, "Russia was in the eye of the hurricane," they looked upon Putin in a positive and constructive light. When he announced his candidacy for president in mid-2004, it was the first time that he had run for a major position. With no experience as an official in political office, he was a relative unknown and many people doubted that he would actually run. But it was a chance for him to prove his leadership capabilities, and he scored a blow that made many take him seriously. He effectively seized the presidential nomination on behalf of the party he headed, United Russia, the newly founded party that is now the majority in the Duma. As the Russian economy sank after the events of August, and thanks to the loss of its position as the world's largest producer of oil and gas, the presidential election of December 4, 2007 was, as one of the leading Russian parties put it, the most fateful for a long time. Russian forces were fighting the separatist Chechen republic of Chechnya for a second year, and the Russian army, hungry and demoralized by the harsh conditions, was causing heavy civilian casualties. Following the vote, the country was flooded with complaints about vote counting and allegations of vote fraud. The election results are still being negotiated, but after a second Chechen war that is still raging, Putin was quick to publish a decree that denied the registration of 12 opposition parties and demanded their closure within 96 hours. In the two years since the decree was published, hundreds of opposition figures

The Magic Wand is a nondestructive tool that can select areas of an image based on uniform color (such as blue skies or white skies). It can also easily pick out solid, uniform colors and shapes in a digital image. The Pen tool is used to draw lines in an image and is essentially the same as the paint bucket tool in Microsoft Paint. The Type tool is used for adding text to a canvas, including fonts and styles. You can use the drop-down menus next to the Type tool to choose one of the thousands of built-in fonts. The What You See Is What You Get (WYSIWYG) tool is useful for previewing changes you make to a digital image. When you make changes to a file, the preview displays what the original image would look like if you didn't make the changes. This allows you to see how your work will look before you save it. The Alpha channel is used to blend certain colors together. For example, you can use the Alpha channel to add yellow highlights and text to a gray background without making the image yellow and without adding gray. The Gradient tool can be used to create a color gradient that is smooth and

continuous. The Hue/Saturation tool can be used to change the color of an image. The Clone Stamp tool can be used to copy pixels from one area of an image and paste them into another area. This is useful for repairing damaged or corrupt images. The Bucket Fill tool can be used to quickly copy pixels from an image into another image. The Dodge and Burn tools can be used to darken or lighten pixels and adjust their contrast. The Adjustment Brush allows you to alter the appearance of an image without directly editing pixels. The Magic Wand tool can be used to select pixels based on uniform color. It works well with skin tone, but you must be careful not to select the skin of a person who is wearing a white shirt. The Gradient tool can be used to create a color gradient that is smooth and continuous. The Pen tool can be used to draw lines in an image and is essentially the same as the paint bucket tool in Microsoft Paint. The Addendum tool allows you to move and resize specific portions of the image to create your own unique effects. For example, you can crop an image to highlight the eyes of a person standing in front of a painting. The Crop tool can be used to crop images to a specific shape. For example,
