It's hard to imagine a graphic designer not having some knowledge of Photoshop. You may use it in a classroom, at work, or to create more artistic projects for your own use. Photoshop has become such an integral part of many professional production processes that the flow in which Photoshop is used is now the standard among graphic designers. As a result, Photoshop has become the de facto standard for working with images. This book explains how to create all the professional products that you may need in Photoshop, including images for brochures, magazines, websites, flyers, print ads, and just about every type of print and online publication. Photoshop is somewhat difficult to learn — or it is. Depending on what you need to accomplish, Photoshop can be a quick, simple, and painless process. However, for someone who wants to create more artistic images, Photoshop can be a long, frustrating process. Why Use Photoshop? Among graphic designers who work with print and online publications, Photoshop is the industry standard for creating the final images. It has become a very popular

---

software among graphic designers because it allows for a variety of creative ways to enhance photos and other images. Photoshop was originally sold because it enabled graphic designers to easily manipulate images on a computer. Many people use it for online images as well as print images. The program has a number of features that make it easy to retouch images, make special effects, and combine various effects in one image. Unlike some graphics programs that use raster (pixel) images to create the final product, Photoshop has layer-based editing. A layer is a collection of pixels that is a subgroup of an image file. Each layer has a transparency setting and can be moved around an image. Layers can be combined, changed, or edited freely. Figure 3-1 shows an image that has two layers and three zones of transparency. **Figure 3-1:** Two layers with three different levels of transparency. Photoshop has a number of features that you can use for retouching an image, such as increasing and decreasing the image size, adjusting the levels of a picture, correcting color balance, and much more. The image shown in Figure 3-2 is a stock image that has been cropped to turn it into a headline. In this figure, you can see that if you increase the size of the image,

you decrease the size of the headline because that's the way the image is set up.

letters@theatlantic.com.Q: AngularJs & ng-if, how to make a ng-click be repeatable I have a ng-repeat that displays some divs, and I need one of them to display the ng-click="function();" within it, but that depends on the user clicking on it first.

What is the best way to make that happen?

Below is a snippet of what I have: A: You can do this: ng-click="function(policy)"

```
HTML Controller $scope.function = function (policy) { // } Q: Can't change String to type as I'd expect I have a String which I set from a variable like this: private static final String DIGIT_SEPARATOR = "."; String code = input.replaceAll("[^\\w]+", "").replace("-", "").replaceAll(DIGIT_SEPARATOR, "").replaceAll("[0-9]+", ""); The String looks
