MojoPortal [Win/Mac]

mojoPortal is a light weight open source ASP.NET CMS, web application framework, and user interface (UI) framework for .NET developers to build modern ASP.NET web sites or web applications quickly. mojoPortal enables ASP.NET developers to create a mobile friendly, content management system (CMS) and web application framework. mojoPortal is cross platform and runs well in various browser like Internet Explorer, Firefox, Safari and Google Chrome. It supports various web standards like HTML5, CSS3 and AJAX. mojoPortal Features:

2. Support for any type of ASP.NET web application like Internet Application, Web Site, Web Forms, MVC, Web API, Mobile Applications, etc.
3. Single Codebase for cross-platform development
4. Lightweight and easy to learn
5. Easy to use, manage and customize
6. Fully automated release and deployment process
7. Easy to customize through HttpModules
8. Fully supports different Databases like SqlAzure, Mysql, PostgreSQL, SQLite, FirebirdSql etc.
9. Can run your ASP.NET website in Medium Trust
10. Fully supports design changes made in mojoPortal editor
11. Supports various web standards like HTML5, CSS3, AJAX, jQuery, JavaScript and others.
12. Fully integrated SEO and Google Analytics
13. Fully supports XHTML and HTML5
14. Supports various marketing solutions like Marge, People, Blogs, Community, Forums, Events and Calendar.
15. Easy to develop custom skins for the required look & feel of your ASP.NET website or web applications
16. Easy to create and customize HttpModules for various HTTP Requests like Admin, HTML, Script, etc.
17. Easy to create and customize HttpHandlers for the required responses like Login, Register, Logout, etc.
18. Easy to customize and build your own databases using various methods like tables, views, columns, etc.
19. Supports various Server Profiles like Hybrid Web Server, Php Server, etc.
20. Fully customizable for a specific environment like Mobile, Tablet and Desktop version
- 21.

Seamlessly compatible for new project workflow management systems like TFS, Git, Subversion and others. 22. Supports cross database functionality like MySQL, PostgreSQL, SQLite, etc. 23. Easy to deploy using web hosting control

MojoPortal Crack+ X64

mojoPortal Cracked 2022 Latest Version describes itself as a professional looking web application framework for web developers. The mojoPortal Full Crack website describes itself as an “extensible Content Management System (CMS) that is easy to use, easy to extend, and easy to customize. The mojoPortal website is built on top of the ASP.NET framework and is completely web standards compliant.”

mojoPortal Technical Features: mojoPortal is extensible, with a large number of built-in features as well as an extensive set of user extensions. The mojoPortal website states “mojoPortal includes templates, skins, code snippets, site settings, and much more.”

mojoPortal includes a set of “intelligent” methods that assist the developer with basic tasks. The “MojoPortal Generator” is a tool that generates the source code of a new “script”. The generator works offline and can be fed with design information as well as the links to images.

Documentation: mojoPortal has extensive documentation located [here](#).

mojoPortal Downloads: mojoPortal was originally released on SourceForge.

mojoPortal is built on top of the ASP.NET Framework, and each feature has its own assembly.

mojoPortal Languages: Source Code - C#

mojoPortal is built with the following files: .NET Framework 3.5.1 .NET Framework 4.0 .NET Framework 4.5 .NET Framework 4.0 & 4.5 Microsoft Web Installer and Software Patcher

mojoPortal Upload files and use FTP - FTP transfers are limited to the system's bandwidth.

Apache Commons FileUpload

mojoPortal Deployments: Deployments - mojoPortal includes a downloadable application model that can be deployed to Windows, Linux, Macintosh, Solaris, BSD, etc.

Runtime Environment - mojoPortal can be used in Web Applications,

Desktop Applications (Windows Forms, WPF), Windows Services, and ASP.NET Server applications b7e8fdf5c8

MojoPortal Crack

* Universal MVCC (aka Master, View, Control, and Content) MVC (Microsoft.mojoPortal.Mvc.Mvc) * Is Microsoft.ASPNet.Mvc compatible. * Resolves dependencies at run time (via PreApplicationStart) using Castle Windsor * Tries very hard to be robust and tolerant of bugs. * Uses the following web controls from Microsoft.com * ASP.NET UserControl * ASP.NET Control * ASP.NET ListBox * ASP.NET DropDownList * ASP.NET DataList * ASP.NET Label * ASP.NET TextBox * JavaScript Templating Engine * Jackson to Serialize JSON * Is Multi-database compliant. Supports MySql, SqlServer, PostgreSQL, SQLite, SqlAzure, Microsoft.mojoPortal.SQL, Delphi/Firbird Sql, and SQLCE * Includes Entity Framework 4.1 support (EFv4) * Includes Entity Framework 4.0 support (EFv3) * Includes Entity Framework 2.1 support (EFv21) * Supports various strong typing (via EntityType attribute) * Runs under .NET Framework 3.5 and higher * Includes security extension of .NET Framework 3.5: * ExtendedMembershipProvider (very high performance) * RolesProvider (basic default membership) * FormsAuthentication (optional advanced form login) * ExtendedPrincipal for performing additional authorization * GenericPrincipal (uses an extended principal) * DefaultMembershipProvider (uses a username and password) * CustomMembershipProvider (abstract class) * ASP.NET Membership Provider support * Built-in profile provider (DefaultProfileProvider) * Built-in Profile provider (ProfileProvider) * Built-in Profile provider (Profiles.DefaultProfileProvider) * Built-in Profile provider (Profiles.RegionalProfileProvider) * Built-in Profile provider (Profiles.CountryProfileProvider) * Built-in Profile provider (Profiles.CityProfileProvider) * Built-in Profile provider (Profiles.RegionProfileProvider) * Built-in Profile provider (Profiles.CommunityProfileProvider) * Supports serialization of data using JSON.NET * Supports serialization of data using

DataContract and XmlSerializer * Supports dynamic serialization of data using JSON.NET

What's New In?

mojoPortal is an extensible cross database, mobile friendly, content management system and web application framework written in C# ASP.NET. mojoPortal has many included features like Blogs, Forums, Event Calendar, Google Maps, Contact Form, Polls, Surveys, ecommerce and more. It is easy to learn, easy to use, easy to extend. If you know how to make an ASP.NET UserControl then you already know how to implement a feature that can plug into mojoPortal. By using mojoPortal, you will quickly build your professional-looking website or application. For the database you can use MS SQL 2005-2008 / SqlAzure / SQL CE, MySql, PostgreSql, SQLite, or Firbird Sql. mojoPortal places a lot of emphasis on web standards and accessibility. Virtually all of the administrative features can be used even if javascript is disabled. mojoPortal ships with about 30 good looking skins. Anyone with a good understanding of html and css should find it straightforward creating custom skins. mojoPortal also runs well in Medium Trust hosting. mojoPortal features:

- content management system (CMS): mojoPortal is a content management system. This means that you can create a website or application with a few clicks. you don't need to know html, css, javascript, flash, xml etc.
- web application framework: mojoPortal has some facilities to extend the core application features and to create additional functionality.
- extensibility: it is possible to modify and extend the mojoPortal core and the ready to use features. For this reason, mojoPortal can be extended and modified more easily than any other framework.
- web profile system: you can create a new web profile for your website and register different extensions to this web profile. Also you can assign different permissions and security levels for each web profile.
- web shop: you can create your own e-commerce site and use the standard and the own extensions.

-videoshare and photo gallery: you can integrate Flickr and Picasa to your web site. -e-commerce: your customer can purchase goods in your web site. -contact and newsletter system: you can define a contact address for your customers and you can use this address to send a newsletter to the customer. -

System Requirements For MojoPortal:

Windows 98/ME/2000/XP (32/64-bit). Mac OS X 10.3.9 or later. GOG.com requires a free GOG account to play. If you do not have one yet, please register now. If you already have an account, just log in through the GOG site and proceed as usual. All our games run on Mac OS X and Windows with the exception of the native Linux versions of our most popular games, like our GoldenEye and Painkiller series, which will run only on Linux and are
