Step 1: Opening Photoshop Download Photoshop CS2 and install it on your computer. In addition to "CS2," Photoshop is sold with its own name and a lower case "x." The terms "Photoshop" and "Photoshop x," are equivalent. Once installed, click on Photoshop. On the Photoshop Menu bar, click on: File Open. There is no icon for Photoshop. Instead you must locate it by browsing the Programs and Files section of the Computer window. It is under Graphics Editor. On Windows, the location is: C:\Program Files\Adobe\Adobe Photoshop CS2. On a Macintosh, the location is: /Applications/Adobe Photoshop CS2. Step 2: Selecting a Window To be able to do anything within Photoshop you need a working window. This means that you must create a new window or open one of the existing ones by clicking on: Window > Window. This opens the Window Menu. From the list that appears, select: New Window. This creates a new window for the editing area. Some versions include automatically an "Undo" window and a "History" window. They can be accessed by clicking on: Window > Window > Undo History. Window > Window > History. The "Undo History" window shows the list of every operation, every alteration you have made, from the most recently made to the first. As you make alterations, it allows you to recall the one before it for undoing. The History window shows the changes that have been made in your last picture. The more pictures you have, the more important it is to have a separate window for the History. Click on: Window > Window > New Image Bin. The purpose of this window is to be a raster image bin. This means that it holds the sequence of the raster images you are working on. Photoshop can organize and hold images in either a Layer, Image, or Bin. This is explained in the next step. Step 3: Selecting a Bin To organize raster images in Photoshop, you must select what kind of bin you wish to use. This means that you must select whether you want to use a Bin, a Layer or an Image.
