Adobe Illustrator Adobe Illustrator ([www.adobe.com/illustrator](http://www.adobe.com/illustrator)) is a vector design tool based on the HTML language that supports a combination of text, shapes, photographs, and 3D. Adobe Illustrator uses a raster-based engine, so the files created are `_bitmapped_`, or `_rasterized_`. The program's layer-based interface allows you to easily combine graphic elements in a file that can then be easily adjusted as you see fit. Illustrator has a huge number of features, but let's look at some of the most basic ones. The Pen tool is used to draw a line on a canvas. You can zoom in and out of the canvas and move the line to a new position. The Pen tool can be used to create simple shapes, such as circles, polygons, and lines. You can also combine lines and shapes to create compound shapes and export them to a PDF. The Type tool lets you type text and enter text attributes such as font, size, and color. Figure 12-17 shows the Type tool in action.

Q: Microsoft.Web.Administration RunAsPassword is disabled by default. You can enable this feature in the web.config file I have downloaded a 32 bit version of MS SQL Server 2016. After installation I create a new Database (Administrator) and a new User. I have also given permissions to the User. I then go to Microsoft Web server management tool to create a new installation and attach a new DB. After clicking attach DB, it is showing me the following error: Microsoft.Web.Administration RunAsPassword is disabled by default. You can enable this feature in the web.config file. I have searched for a solution and tried every suggested solution, including changing the password of the Administrator account. Nothing is working. Please help.

A: As it is mentioned in the error message, you need to set runAsPassword to true in the section of the web.config file

Comparative bioavailability study of telmisartan 80 mg film-coated tablets and conventional tablets in healthy Korean volunteers. A bioequivalence study was performed in 24 healthy Korean volunteers to compare the bioavailability of a new film-coated formulation of telmisartan (telmisartan-80-CCW) with that of its conventional (oral) formulation (telmisartan-20-CCW). Telmisartan-80-CCW showed similar pharmacokinetics as telmisartan-20-CCW. It was not necessary to add food or water to the formulations. The results of this study show that telmisartan-80-CCW is bioequivalent to telmisartan-20-CCW and, therefore, support the efficacy and safety of telmisartan 80 mg in the treatment of hypertension. The relative bioavailability of telmisartan-80-CCW was 106.4% (95% CI: 99.6, 113.9) of telmisartan-20-CCW. Plasma telmisartan concentration versus time data were determined by a validated HPLC method.
