Telnet Server Free Download

Telnet Server is a Telnet server software which can be used as an alternative to the Microsoft Telnet Server. It supports Telnet clients and telnet server application like KDDC, 4NT etc. Telnet Server is a client/server application and has client and server components. The Telnet Server accepts TELNET and CRLF connections from the client and multiplexes the connection to multiple clients and telnet servers (as separate sessions) simultaneously. You should install a minimum of 4 (ideally 8) of Telnet Server on the server machines. Telnet Server supports connection limit, and you can limit the maximum concurrent clients to 8, and each client can have a maximum of 4 (16) concurrent telnet sessions. It supports multiple simultaneous logins to a single host. In this way, you can achieve true windowing in the same manner as Telnet servers, but also giving local access to telnet clients who do not have a Telnet client. Telnet Server also provides a Domain and User login support based on the Domain login map file located in the registry under HKEY_LOCAL_MACHINE\SYS

TEM\CurrentControlSet\Services\LANMAN\Parameters. Telnet Server also allows connection management, remote administrative access to Telnet servers, remote shutdown and logoff of users and remote printing on telnet connections. Telnet Server Features: · 1-Click installation · Install and Configure Telnet Server using the utility included in this package · Free (trial) · No registration is required to use the trial · Telnet Server supports connection limit based on Host or IP address · Telnet server can be configured to allow or disallow concurrent sessions. · Telnet Server supports connection limit based on host · Telnet server supports up to one connection per host · Telnet Server supports multiple simultaneous logins to a single host · Telnet Server support Network share home directory and Domain logon script · telnet server supports User permissions and Group permissions · telnet server supports Novell Network authentication · Telnet server supports automatic login based on IP address, User name and Password · Telnet Server allows user to set logon time zone · Telnet Server allows user to change password at login time · Telnet server allows user to set password expiration time · Telnet Server allows user to change

password at next login time · Telnet Server allows use of new default GUI version · Telnet

What's New In Telnet Server?

Telnet Server Telnet Server allows a Windows NT/2000/XP system to become a multi-user telnet server. It is easy to install and operate. Once you have installed the software, you can pan style='color:blue'>Turn your computer into a Telnet Server. The NT 5.1 and NT 4.0 "Telnet server" is the Windows NT 3.51 SP6 "Telnet Server" version, but the telnet server is not really a telnet server, it has to be a terminal server to be a telnet server. Telnet Server Features: Telnet Server is a Telnet server for Windows NT 4.0 and 5.1. Telnet Server does have some other features, but they are limited to pan style='color:blue'>Microsoft Telnet and CRT and users are able to connect to it through a standard Telnet client. These features are included: · Service supported on NT 3.51, NT 4.0 and NT 5.1 · Service supports Windows NT console Telnet · Uses ntcon · Service can be installed as an NT service or as a Windows service ·

Service can be configured to start automatically when the system boots · Service can be started automatically by Windows NT when a telnet client connects · Service can be started automatically by Telnet client when it starts · Service can be stopped by telnet client or NT that started the telnet client · Service can be stopped by NT when a telnet client logs off · Service can be stopped by user · Service can be restarted after it is stopped by telnet client or NT that started the telnet client · Service can be restarted automatically by NT when the service is stopped · Service can be restarted automatically when the NT service itself is stopped · Service has a status display in the Windows NT console · Service receives telnet client status when connected · Service can receive telnet client keystroke event · Service can send telnet client keystroke event to NT · Service can specify a maximum amount of time to remain active as an NT service · Service can restrict the command list available to a telnet client by the authentication method selected · Service can be configured to prevent NT connections from the "root user" · Service can be configured to prevent NT connections from the "guest user" · Service can be configured to allow only authenticated telnet

clients to use the service
